Like so many of the law enforcement professionals who depend on them, Beretta firearms have proved their value where it counts most: in the line of duty.

From all branches of the U.S. Military to the French Gendarmerie, the world's elite military and law enforcement organizations carry Beretta. In this catalog you will see why.

Here, you will see how we make our law enforcement products the best in the world. How our complete line can meet your every need. How advantages in performance, reliability, durability, training and service have made Beretta the firearm of choice for thousands of North American law enforcement agencies and thousands more throughout the world. You will see why – at the moment of truth – you'd want a Beretta in your hands.

In-Field Armorer Training Courses

The In-field Beretta Training Academy Armorer's Course is an in-depth program which has been established to provide training at hosting Departments. The courses are designed to give Department Armorer's a challenging and practical course on the features, design and function of the 92/96 series as well as the complete 8000 series and the 1201FP Shotguns. The in-field courses are 2 days. One day courses are now being offered for the Sako TRG Rifle and the Cx4 Storm Carbine. For more information on the In-field Courses, contact the Beretta Training Academy at (301) 283-2191 or view our schedule at www.berettausa.com

In-Field Tactical Pistol Course

This course is designed to enhance survival pistol skills. Emphasis is placed on safe handling and weapons control. The skills developed in this course are designed to help save lives and will benefit tactical teams in close quarter situations. The In-field Armorer's Course and Tactical Pistol Course can be combined into a 5-day course.

Topics Covered

- Safety when handling
- Multiple target engagement
- Reaction, problem-solving exercises
- Tactical reloads
- Barricade tactics
- Realistic sights, trigger, and follow-through
- Strong-hand, support-hand firing
- Drawing and firing techniques
- Stoppage drills
- Weapons control
- Use of cover and concealment
- Tactical moving techniques

1,000 rounds of ammo required for participation in this course.

Factory Armorer Training Class

Classes are scheduled each month for law enforcement and military personnel. The course content will cover the Model 92/96 Series and its variants, the Cougar series and the 1201FP shotgun. This is a hands-on practical course that provides Department Armorer's with strong detail of disassembly, reassembly, troubleshooting and repair of the Beretta products. An exam is given to insure the student understands the information and that the most proficient Armorer returns to his/her department or unit.

Topics Covered

- Pistol and shotgun nomenclature
- Detail stripping
- Ammunition
- Design and function
- Quality control inspection
- Field stripping
- History
- Maintenance
- Troubleshooting

This is a five-day course and an extensive factory tour is provided. For more information on scheduling please contact the Beretta Training Academy at (301) 283-2191 or view our schedule at www.berettausa.com.

“ Perhaps the most informed instructors I've encountered. I have attended many schools, this is superior. ”

Richard Jordoin
Providence County Sheriff's Department

“ This course is perfect for my department's needs. Also this course not only makes me an armorer, but it makes me a better instructor. ”

Chris Casazza
Prince Georges County Department of Corrections

2

Cx4 Storm **NEW**

CX4 Storm

The Storm is coming... Designed to meet the needs of law enforcement, the new Cx4 Storm is the perfect carbine for all applications. The carbine accepts standard full-size Beretta pistol magazines, perfectly complementing the famous 92, 96, 8000, 8040 and 8045 series of Beretta pistols. The fixed barrel design and long sight radius (12.9")

make this gun inherently accurate. The cold hammer forged 16.6" barrel is chrome-lined for maximum corrosion resistance and increased barrel life. The 5.75lbs. weight and overall length of 29.7" make this carbine light and compact.

Storm

MODEL	CAT. CODE	ACTION	SIGHTS	CALIBER	MAG. CAPACITY	NOTES
NEW Cx4 Carbine (92)	JX49215	Single	Ghost Ring	9 mm	15 rounds	Accepts 92 Series magazines*
NEW Cx4 Carbine (96)	JX49615	Single	Ghost Ring	40 S&W	11 rounds	Accepts 96 Series magazines*
NEW Cx4 Carbine (8000)	JX48015	Single	Ghost Ring	9 mm	15 rounds	Accepts 8000 Cougar Series magazines*
NEW Cx4 Carbine (8040)	JX48415	Single	Ghost Ring	40 S&W	11 rounds	Accepts 8040 Cougar Series magazines*
NEW Cx4 Carbine (8045)	JX48510	Single	Ghost Ring	45 Auto	8 rounds	Accepts 8045 Cougar Series magazines*

*Accepts full-size magazines only. Reduced length magazines (Compact, Compact Type M, Mini Cougar, etc.) will not fit.

CX4 Storm

3

NEW Cx4 Storm

CARBINE

Semiautomatic blowback design is simple, rugged and reliable. Field stripping can be done simply and quickly without any tools. High strength technopolymers are used to reduce the

weight, increase corrosion resistance, eliminate problems associated with metal finish wear, and achieve an affordable price.

	CX4 STORM
Action	Semiautomatic blowback
Caliber	9 mm, 40 S&W, 45 Auto
Stock	Synthetic
Recoil Pad	Rubber
Safety	Cross bolt, reversible
Overall Length	29.7" *
Barrel Length	16.6"
Length of Pull	13 1/4" - 15" **
Weight Unloaded	5 3/4 lb
Rear Sight	Ghost ring with two size apertures
Front Sight	Post, adjustable for windage & elevation
Sight Radius	12.9"
Magazine	Detachable
LE Magazine Capacity	15 rounds (9 mm), 11 rounds (40 S&W), 8 rounds (45 Auto)
Case	Yes

*Without stock spacers installed ** Adjustable with stock spacers

4

Cx4 Storm **CX4 Storm**

The cross-bolt safety, magazine button and bolt-handle are easily reversible for right- or left-hand use. Even the ejection can be switched from right to left and back without the need of tools or additional components. Firing pin and hammer block prevents movement of these critical components until the trigger is pulled and a bolt safety will not allow the bolt to cycle should the carbine be dropped or struck against an object. Once again, Beretta

teamed with internationally renowned Giugiaro Design to study the ergonomics and style the firearm. Rounded forms are snag-free, modern and innovative. A rubber stock comb provides a comfortable rest for the cheek. The magazine is inside the grip, protected from impact and the environment.

OPTIONAL CARRY CASE
(NOT INCLUDED)

CX4 Storm

5

NEW Cx4 Storm

CARBINE

Controls are very similar to those found on our popular 92FS pistols, so most shooters will be immediately familiar with the operation of this firearm. Length of pull can be lengthened in .6" increments, from 13 1/4" to 15" by adding one to three stock spacers (one provided). Multiple sling attachment points allow a multitude of carry options. A retractable forward accessory rail extends out from the fore-end, allowing quick mounting of a tactical light or laser unit. Hard

mounting points allow the addition of various accessories, including side, top and bottom "Picatinny" rails. These will accept optics, tactical lights, lasers and vertical grips. One side rail is included. The front post sight is adjustable for windage and elevation, while the rear sight has long-range and ghost ring apertures. Both sights are protected by rugged "ears" and may be folded down when optics are used.

CX4 STORM WITH OPTIONAL ACCESSORIES (NOT INCLUDED)

OPTIONAL TOP PICATINNY RAIL (NOT INCLUDED)

**TRG 22
SCOPE, MOUNT AND
BIPOD NOT INCLUDED**

- ① Modular Metal/Composite Construction
- ② Barrel: Cold-hammer-forged super target grade barrel made specially for the TRG. Threaded muzzle for optional muzzle brake.
- ③ Action: Cold-hammer-forged from special alloyed steel, for extra rigidity. Integral 17mm parallel scope mounting rails with recoil-stop slots.
- ④ Bolt: 3-locking lug bolt, 60-degree opening angle for fast bolt throw.
- ⑤ Metal Surface Finish: Satin blued or Phosphated, Black
- ⑥ Stock color: Matte black or OD Green.
- ⑦ Butt Stock: Adjustable for height and cast off/on, cheekpiece adjustable laterally and vertically with spacer, specially designed contour allows for steady and firm firing position.
- ⑧ Fore-end: Integral shooting accessory rails. Integral slot for fast mounting/dismounting of the TRG adjustable steel bipod.
- ⑨ TRG Bipod (OPTIONAL): Specially designed for sniping, this new bipod “cradles” the rifle below the hinge point offering very steady shooting positions.
- ⑩ Fire Control: Fully adjustable target trigger unit.
- ⑪ Safety: Trigger unit with fast and reliable safety lever, blocks firing pin.
- ⑫ Magazine: QD-Magazine, 2-row, center-feeding; magazine capacity: 10 rounds/308 Win; 7 rounds/300 Win Mag; 5 round/338 Lapua Mag.
- ⑬ Scope Mount (Optional): QD-Sako Optilock/TRG scope mount for fast and reliable scope mounting of 1” and 30mm tubes.

The Precision Tool for a High Power Marksman

The Sako TRG is a detailed study of the needs of a marksman. It is designed for one job and one job only: to hit the target. The result is a total accuracy concept designed 100% by Sako. The globally acclaimed Sako TRG is available in two models, the TRG 22 and TRG 42.

The TRG adjusts to match each shooter’s individual style, build and posture. The trigger, cheekpiece and buttplate are fully adjustable, making the Sako TRG an individual rifle for each shooter.

Target grade barrels made specially for the TRG (CR-MO alloy) are cold hammer-forged. Rigid action is cold hammer forged from special alloyed steel. Integral 17mm parallel scope mounting rails with recoil stop slots are machined into the receiver. The sturdy bolt with three locking lugs feeds rounds reliably from the centerline of the detachable staggered magazine. This bolt lift angle is only 60% for fast bolt throw.

The high-tech constructed, aluminum-reinforced composite stock is completely adjustable to meet the individual preferences of all shooters. The target trigger is a fully adjustable two-stage unit.

The TRG 22 in 308 Win handles a multitude of accuracy tasks: it is a thoroughbred competition rifle, and serves as the primary tactical rifle for the government forces of several nations.

The TRG 42 in 300 Win Mag and 338 Lapua Mag is a true long-range tactical rifle. It can be equipped with various accessories to fulfill the demanding duties of the tactical sniper.

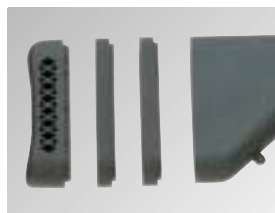

Hold the Sako TRG in your hands, feel the weight, check all the details, inspect the fit and finish and test it with a variety of ammunition. The facts will speak for themselves.

Model	Cat. Code	308 Win	300 Win Mag	338 Lapua Mag	Overall Length (in)	Barrel Length (in)	Weight Unloaded (lb)	Magazine Capacity (rnds)

SEMI-AUTOMATIC SHOTGUN

Spacers allow adjustment of length of pull to take into account use of body armor and smaller stature officers.

1201FP Safety in 12 gauge

Designed for special purposes, the 1201FP semiautomatic is the ideal choice for law enforcement duty. The short-recoil, inertia-operated system handles five 2 3/4" or four 3" shells in an extended tube magazine. The 1201FP's lightweight, matte black polymer stock shrugs off the roughest treatment. Metal parts are protected with Beretta's exclusive weather-resistant matte black finish. Bolt and trigger are finished in matte silver. This model comes equipped with a "Ghost Ring" sight system and tritium front sight.

The Advantage of Versatility

The key to superior performance in semiautomatic shotguns is simplicity. In addition to its reliable, soft-shooting gas systems, Beretta offers other unparalleled alternatives. The rugged, mechanically operated 1201FP combines special features with reliability and dependability. Our tough 1201FP semiautomatic delivers quick cycling firepower and absolute reliability in a durable, no-nonsense package.

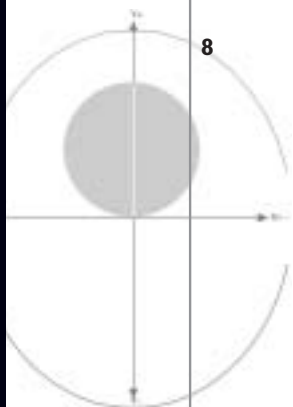

The rotating bolt ensures a perfect lock-up. Take down is easy for cleaning, transportation or storage. The short-recoil mechanical action delivers the power of a locked breech shotgun, concentrating 100% of the gases behind the shot wad for extra power and range.

Rugged and reliable, this semiautomatic short-recoil 12 gauge shotgun has an ergonomically designed stock for less felt recoil and more control. All 1201FP's feature anti-glare matte finish, durable weatherproof plastic trigger and fore-end, ghost ring rear sight, adjustable blade front sight with tritium insert, front sling swivel and rear sling swivel stud. Like our service pistols, the 1201FP features chrome-lined bore and a bolt that locks open after the last round is fired. The 1201FP provides excellent firepower: the short recoil action coupled with rotary bolt lock-up yields a high cyclic rate of fire. Also available with pistol grip, for enhanced off-the-shoulder controllability. Pistol grip stock comes equipped with a set of spacers to adjust the length of pull.

The Ultimate Pistol

It's not an official title, but it perfectly describes the Beretta 92FS. Selected by a multi-national roster of defense and law enforcement organizations, tested and proven through a demanding quality control regimen before leaving the factory, and proven in the field in countless defensive confrontations, the 92FS is in all respects the "ultimate."

The Legendary Beretta 92 Pistol

The most tested and trusted personal defense weapon in history. The 92FS, designated M9 by the U.S. Military, not only meets or exceeds all U.S. Military testing guidelines, it totally rewrites them. The Beretta 92 Series pistol is consistently five times more reliable than pistols produced by other manufacturers. Each pistol must pass a battery of more than 3,000 quality control checks and measures that includes complete interchangeability of parts.

Precise, Safe, Reliable

92 Series pistols are semiautomatics and operate on the short-recoil, delayed locking block system, which yields a faster cycle time and delivers exceptional accuracy and reliability. Each features a lightweight, forged frame made from aircraft-quality aluminum alloy. All 92 Series pistols feature unique safety refinements. On FS models, the manual safety also functions as a decocking lever. A firing pin block secures the firing pin. The chamber-loaded indicator is visible or can be felt by touch.

Choice of Operating Systems

Beretta offers a choice of operating systems, each with specific safety options:
 FS Models - Double/single action, external ambidextrous manual safety, decocking lever, trigger bar disconnect, rotating firing pin striker, visible firing pin block device.
 D Models - Double action only with no safety lever ("slick slide"), firing pin block device.
 G Models - Double/single action, external ambidextrous decocking lever, rotating firing pin striker, visible firing pin block device.
 All models feature a "chamber-loaded" indicator.

92D, 96D

- ① **Open Slide Design.** Open top slide virtually eliminates jamming or stovepiping. Allows the user to load the chamber one cartridge at a time should the magazine be lost or damaged.
- ② **No Glare Finish.** Beretta's exclusive Bruniton non-reflective matte black finish is a superior corrosion-resistant coating.
- ③ **Visible Automatic Firing Pin Block.** The front part of the firing pin is blocked from any forward movement until the trigger is pulled completely back. Even if the pistol falls and strikes the ground, muzzle-down, the firing pin will not strike the primer.
- ④ **Ambidextrous Safety.** Easily accessible by the thumb of a right- or left-handed shooter, it is spring-loaded so it's either positively "on" or positively "off." (Does not apply to D or G Models).
- ⑤ **Sure, Firm Grip.** The front and back of the grip are grooved and the grip frame is flared slightly at the base to enhance pointability and control.
- ⑥ **Reversible Magazine Release.** Positioned next to the trigger guard for either right- or left-handed shooters. Allows rapid reloading. Magazine drops clear when released.
- ⑦ **Light Aluminum Frame with Combat-Style Trigger Guard.** The trigger guard is squared off and grooved for a firm grip using one or two hands, even when wearing gloves.
- ⑧ **Disassembly Latch.** Conveniently located to simplify field stripping and maintenance, the latch makes the 92FS one of the easiest guns to disassemble.
- ⑨ **Unique Ultra-Safe Design.** The safety levers on the slide also function as the pistol's decocking levers. When pushed down, the rear part of the firing pin (striker) is rotated out of alignment with the front part of the firing pin.

Chamber Loaded Indicator. When a round is chambered, the extractor protrudes slightly to show a red indicator. In the dark, the user can feel the protruding indicator.

92/96 Vertec

Beretta Vertec. Take the world's most tested and trusted pistol, the Beretta 92/92 series. Add new capabilities in response to the demanding needs of our law enforcement and military customers without compromising the quality, reliability, and safety for which the Beretta pistol is already famous. The result is the revolutionary new Beretta Vertec.

The new vertical grip design, combined with a special short reach trigger and thin, innovative dual-textured grip panels, guarantee a sure grip and maximum controllability during rapid fire, even for small-handed shooters. An integral accessory rail is built into the

frame to attach a variety of popular white light and laser devices. The front sight is removable for the easy installation of tritium or other specialty sights. The magazine well has been aggressively beveled for faster, more positive reloads.

The Beretta Vertec...the next step in a long tradition of pistol excellence.

(SUREFIRE NITROLON LIGHT NOT INCLUDED)

92FS VERTEC INOX

84, 85 CHEETAH

- 1 **Barrel.** High-strength nickel-chromium-molybdenum steel with hard-chromed bore for longer life.
- 2 **Open Slide Design.** Open top slide virtually eliminates jamming and stovepiping.
- 3 **Firing Pin Block.**
- 4 **Sights.** Fast, sure target acquisition from standard 3-dot system. Notched rear sight is dovetailed to slide. Blade front sight is integral with slide.
- 5 **Ambidextrous Safety.** Easily accessible by the thumb for right- or left-handed shooters.
- 6 **Magazine Release.** Reversible to accommodate right- or left-handed shooters (Model 84 only).
- 7 **Durable Frame.** An anodized alloy offers superior corrosion resistance. Matte black finish is non-reflective.
- 8 **Combat-Style Trigger Guard.** Provides support for a two-handed grip and offers an enlarged opening for easy access with gloves.
- 9 **Double Action Trigger.** The first round is full double-action mode, and the second and all subsequent rounds are fired single-action.

Quality You Can Count On

These medium frame pistols deliver 380 power in a personal-size package and maintain the reliability, safety, and performance features of Beretta's legendary 92FS, making the Cheetah an ideal back-up gun for law enforcement professionals and providing all the features needed for off-duty use.

84 Cheetah

A 380 caliber double-action pistol with staggered magazine and manual safety with hammer decocking device. The magazine release is reversible, and the enlarged combat

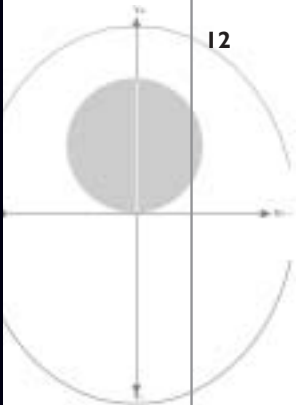

trigger guard provides support for a two-handed hold or use with gloves. The 84 Cheetah features a corrosion-resistant anodized alloy frame with matte black finish and chromium-plated bore.

85 Cheetah

With its straight-line, 8-round magazine, this pistol has a slimmer profile for those with smaller hands.

COUGAR D

COUGAR F

A NATO Qualified Compact Pistol

The Beretta Cougar 8000 Series semiautomatic has developed a formidable reputation as a reliable, potent pistol. First designed primarily as an undercover gun, the Beretta Cougar 8000 is now carried by growing numbers of police officers as their official duty sidearm because of its superior ergonomic design, low recoil and inherent accuracy. NATO qualified, the Beretta Cougar boasts an incredible service life. Using the modern C.A.D. design system, Beretta has been able to develop an ergonomically advanced pistol, compact but capable of handling such high-power cartridges as the 9mm Parabellum, 357 Sig, 40 S&W, or the 45 ACP, with great fire capacity and extraordinary long life. This has been possible also thanks to a brilliant adaptation of a proven locked breech system with rotating barrel.

Unique Rotating Barrel

By channeling part of the recoil energy into barrel rotation and by partially absorbing the barrel and slide recoil shock through the central block before it is transferred to the frame, the Cougar achieves unusually low felt recoil. When the Cougar is in battery, the positive lock-up of barrel to slide assures perfect alignment of barrel and sights. Upon firing, the barrel travels and rotates with axial movement. The result is superior accuracy and quicker recovery for second shots.

Advanced Ergonomics

The Cougar is one of the most ergonomically advanced pistols in its class. The user-friendly, contoured frame and grips make the Cougar exceptionally easy to control during firing. By taking hand anatomy and instinctive hold into account, the Cougar accommodates smaller hands and also protects larger hands from being pinched by the slide. All edges are rounded or beveled and carefully finished to make the Cougar virtually snag-resistant and exceptionally easy to draw and conceal.

Unique rotating barrel. Recoil energy is absorbed by the rotating barrel system in all 8000 Series pistols.

Cougar

- 1 **Rotating Barrel.** Reduces felt recoil and improves stability and accuracy. Cougar barrels are cold-hammer forged and bores are hard-chrome-lined for exceptional strength and durability.
- 2 **Quick Reaction 3-Dot Sights.** Beretta's standard 3-dot sight system is designed for quick target acquisition. Three-dot Tritium night sight systems are also available.
- 3 **Unique Ultra-Safe Design.** (F models) The same safety systems found on Beretta's 92/96 Series pistols including ambidextrous safety decocking lever, rotating firing pin striker, automatic firing pin block, chamber-loaded indicator.
- 4 **Radiused Backstrap.** Grip area is precisely recessed and curved to snugly accommodate the shooter's hand, protecting the thumb web from being pinched by the slide.
- 5 **Grips.** Standard grips are checkered plastic. Checkered walnut grips available.
- 6 **Combat-Style Trigger Guard.** For a sure two-handed grip. Enlarged opening allows the use of gloves.
- 7 **Disassembly Latch.** Conveniently located, simplifies field stripping and maintenance.
- 8 **No Glare Matte Black Finish.** External surfaces are protected with Beretta's exclusive Bruniton non-reflective finish.

Mini Cougar

The Mini Cougar couples concealability with serious firepower. Fully one inch shorter in the grip and weighing in at more than four ounces lighter, the Mini Cougar is even more compact than the full size Cougar. Yet it has all of the same performance and safety features of its big brother maintaining a good firing capacity. The Mini Cougar is available in F and D operating systems. An optional full capacity extended magazine is specially contoured to aid controllability and provide maximum capacity.

9000S TYPE F
(ACTUAL SIZE)

ACCESSORIES AVAILABLE FOR THE 9000S INCLUDE:

A high-capacity magazine adapter that allows magazines for Beretta 92/96 pistols to be used with the 9000s. (Part Number C59954)

An extendable magazine follower with finger rest. Finger rest extends when the pistol is gripped. (Part Number C81478)

Professional Power

The remarkably compact Beretta 9000S pistols are distinguished by their light-weight, compact size and potent calibers (9mm and 40 S&W), making them comfortable and practical undercover or off-duty guns. The high capacity magazine (12 rounds in 9mm, 10 rounds in 40 S&W) makes the 9000S pistols ideally suited to the law enforcement profession.

Advanced Materials

The 9000S frame is manufactured with a fiberglass-reinforced technopolymer incorporating two special steel alloy rail inserts that guarantee perfect slide-to-frame fit and the optimal tilt-barrel movement during the locking and unlocking phases.

Innovative Locking System

The patented, innovative locking system consists of a unique tilt-barrel, open-slide design. Two strong barrel locking lugs engage the slide directly. This direct, barrel-to-slide lock-up requires no intermediate components and maintains the same high degree of reliability found on Beretta's traditional open slide design.

Ergonomic Design

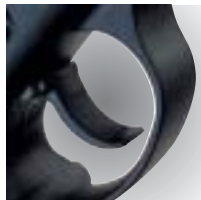

The 9000S grips are made of a high-tech soft polymer, overmolded onto the frame. This durable and wear-resistant material absorbs vibrations and ensures a firm grip even in adverse weather conditions.

GEOMETRIC LOCKING SYSTEM WITH TILT-BARREL

9000S

- ① **Ergonomic Giugiaro Design.** The distinctive Giugiaro design is aesthetically and functionally superior.
- ② **Compact Dimensions.** The reduced dimensions, especially in length and height, make this pistol particularly convenient for carry.
- ③ **Techno-polymer Frame.** The use of the latest generation glass-reinforced techno-polymers reduces the overall weight of the pistol.
- ④ **Chrome-Plated Barrel.** Steel barrel is sandblasted and matte blued. The bore is chrome-lined for maximum corrosion resistance and durability.
- ⑤ **Geometric Locking System with Tilt-Barrel.** The innovative and patented locking system is based on direct barrel-to-slide engagement. The absence of any intermediate locking components increases the durability of the firearm.
- ⑥ **Slide.** It is manufactured from steel alloy, sand-blasted, phosphated and Brunton finished for maximum corrosion resistance and durability.
- ⑦ **Sight System.** The white 3-dot sight is designed for quick target acquisition. Both the rear and front sights are dovetailed to the slide for windage adjustments and may be replaced. Tritium sights available.
- ⑧ **External Hammer.** The external hammer retains the traditional Beretta design with through-hole and gripping serrations. Double-action-only D models feature a spurless hammer.
- ⑨ **Ergonomic Grip.** Featuring a soft yet durable overmolded polymer, the grip absorbs vibrations and ensures positive pistol retention.
- ⑩ **Great Fire Capacity.** The high capacity magazines (12 rounds in 9mm, 10 rounds in 40 S&W) are included with each pistol. The Model 9000S also accepts the magazine of the 92 Series pistols with use of an optional spacer.

Simple Disassembly and Re-assembly

The 9000S disassembly mechanism allows quick and easy fieldstripping, yet it does not allow inadvertent or involuntary disassembly. The disassembly lever automatically returns to the locked position when the barrel and slide are reassembled onto the frame.

Automatic Safety, Manual Safety

All 9000S models feature a visible automatic firing pin block that prevents the gun from firing in case of inadvertent drops or strikes against hard surfaces. It is de-activated only when the trigger is pulled back. The manual external safety lever on the "F" models (not present on double-action-only "D" models) is frame mounted and can be activated when the hammer is fully armed or in half-cock position. This lever interrupts the trigger linkage and prevents the rotation of the sear. This same lever also acts as a decocking mechanism, dropping the hammer to the half-cock position by simply rotating the lever past the safety position. From this position, it is possible to fire the pistol in double-action (after disengaging the safety). The safety/decock lever is ambidextrous. All 9000S models also feature a chamber-loaded indicator.

9000S TYPE D

9000S DISC HOLSTER

9000S CONCEALMENT HOLSTER

9000S Type F

The F models in double and single action feature the automatic firing pin block safety, external manual safety on the frame, and a hammer decock feature.

9000S Type D

The D models are designed to fire only in double action and therefore do not require a decocking feature. The spurless hammer returns, after every shot, to its rest position against the slide. The D models do not have an external safety lever, but still feature the automatic firing pin block safety that is always active.

3032 TOMCAT INOX

3032 TOMCAT BLUED
(ACTUAL SIZE)

Tomcat, Bobcat

Quality Back-Up Pistols

The same dedication to advanced design, uncompromising quality and strict quality control that make the 92FS, Cougar and Cheetah such international standouts is found in all Beretta small caliber, pocket-size pistols. Simplicity, safety and practicality make these pistols outstanding for back-up and off-duty use.

Practical and Simple

User-friendly design is common to all Beretta small frames. The exclusive tip-up barrel allows the user to easily load a round directly into the chamber. It also assists in the safe clearing of the pistol by allowing a live round to be easily removed from the chamber and the bore quickly checked. Jamming and stovepiping problems are virtually eliminated by the open slide design shared by all small frame Berettas.

Advanced Materials

Keeping an eye on quality helps keep Beretta small caliber semiautomatics out in front. Beretta pistols in the 3000, 21 and 950 Series utilize the toughest of forgings for their barrels, while slides are fashioned from solid steel bar stock. Frames are machined from solid aluminum forgings.

3032 Tomcat

Stopping power, concealability – that's what the new double-action Tomcat is all about. Using 60-grain .32 ACP hollow-point ammunition, this latest addition to Beretta's small frame collection provides firepower equaling the punch of some .380 ammunition. Yet, all this serious capability is packed into a compact, lightweight, 4.9 inch, 14.5 ounce package. A drift-adjustable rear sight provides for superior accuracy. This model is available in a matte black anti-glare, blued glossy or Inox finish.

The Inox model has a stainless steel slide and barrel and an alloy frame that is gray anodized to match the color and finish of the stainless components. The trigger, hammer, safety, magazine and other parts of the Inox model are blued.

The Tritium model incorporates the Big Dot Tritium Express Sight by Express Sight Systems with the Tomcat Inox. The Big Dot Tritium Express Sight allows for exceptionally fast sight acquisitions with a Tritium front dot for low light defensive situations.

- ① **Barrel.** Forged out of special high-strength steel; precisely rifled for accuracy. The Inox models feature stainless steel barrels.
- ② **Slide.** Machined out of high-strength carbon steel and specially heat treated.
- ③ **Sights.** Notched rear sight and blade front sight for fast target acquisition.
- ④ **Safety.** Manual, conveniently thumb-operated.
- ⑤ **Contoured Tang.** Top of the grip area is precisely curved and relieved to snugly accommodate the shooter's hand, thus protecting the thumb web from being pinched by the slide and increasing the pistol control upon firing.
- ⑥ **Frame.** The frame is made of special aluminum alloy forgings and anodized black or gray.
- ⑦ **Tip-up Barrel Latch.**
- ⑧ **Trigger Pull.** Smooth, crisp pull in double/single action.
- ⑨ **Snag-Proof Design.** Smooth contours permit quick, smooth draw.

21 BOBCAT INOX

3032 TOMCAT TRITIUM

21 Bobcat

Trustworthy and Precise. Chambered for 22LR or 25ACP. This compact, rugged small frame measures just 4.9 inches overall and weighs only 11.5 ounces. It features a lightweight, alloy frame, blued steel slide, tip-up barrel, and double/single action. The Bobcat comes with a 7-round magazine for 22LR ammunition, or an 8-round magazine for 25 caliber cartridges. Available in matte black, blued glossy or Inox finish. The Bobcat Inox model has a stainless steel slide and barrel and the alloy frame is gray anodized to match the color and finish of the stainless components. The other metal parts (trigger, hammer, trigger guard, safety, magazine, etc.) are black finished.

18 Model 92

The Model 92 knife utilizes the styling of one of the most famous handguns in the World, the Beretta Model 92. It not only looks like a 92, it performs like the famous firearm. One-hand operation, AUS 8 steel, liner lock. Blade is stamped with the same markings as an actual 92 handgun.

Avenger II

The Avenger's sleek black carbon fiber handle provides the ultimate in light-weight and strength. Combine the strong light-weight carbon fiber with VG-10 steel to the Tanto-style blade and you have a matchless light-weight folding tactical knife.

Airlight II (NEW)

This new generation of Airlight knives has the same slim lightweight feel. It boasts AUS 6 steel and solid aluminum scales. The liner lock system allows for one-hand operation. Beretta's new Sure Grip™ finish gives a confident grip for defense.

Busfield

Master Knifemaker Jack Busfield created these Beretta Busfield knives in the Beretta tradition of excellence. Beautifully crafted, yet fully functional and durable, Beretta Busfield knives guarantee years of performance and satisfaction.

Aluminum Airlights

Aluminum Airlight knives are available with ultra-slim profiles that allow them to ride easily whether you're in uniform or engaged in plainclothes operations. Medium and large models offer a stainless clip for easy carrying and quick access. Based on your preference, select from solid (non-skeletonized) blade or the Beretta's skeletonized blade. The lightweight alloy used for the scales are armored to handle the rigors of rugged use, yet its brushed metal finish gives it distinction.

The tradition of the Aluminum Airlight knives is also available in black anodized aluminum. The Black Airlight offers optimum performance and an ultra-slim profile with ambidextrous thumb-stud for easy one-hand opening and closing. The law enforcement community is embracing it, with its folding design, as a service emergency tool.

Zytel Airlights

The Zytel Airlights feature ergonomically shaped, non-slip handles made from non-glare Zytel™ high performance polymer. Available with solid (non-serrated) or skeletonized blade and with either a straight edge or 30% serrated, each is honed to amazing sharpness. Sharpness that will last when you need it most.

**BERETTA IS LOOKING
FOR A FEW BRAVE OFFICERS.**

BERETTA

One of the biggest supporters of the law enforcement community is proud to sponsor the B.R.A.V.E. (BERETTA RECOGNITION AWARD FOR VALOR AND EXCELLENCE) Award program to honor law enforcement officers for exceptionally heroic and valorous actions in the line of duty.

One officer will be selected, quarterly, to receive a commemorative plaque and special issue Beretta 92FS at an awards ceremony held annually at Beretta U.S.A. Please visit www.berettausa.com for full details on the program.
